疾患	異常	疾患と関連して非生理的に存在する自己タンパク質、 自己ポリペプチド、または自己ペプチド
肥満症	エネルギー消費より摂取が 多いことに起因する体重増加	シンデカン -3 、ペリリピン、オレキシン、ガラニン、 グルコガン様ペプチド受容体
変形性関節症	軟骨変性	カテプシン、プラスミン、コラゲナーゼ、メタロプロテイナーゼ
脊髄損傷	再生阻害	Nogo-1
高血圧症	持続性高血圧	アンギオテンシン変換酵素
消化性潰瘍疾患	胃酸過多	H⁺/K⁺ ATPase 、ガストリン
老化		スーパオキシド・ジムスターゼ
うつ病	セロトニン過剰	セロトニン 5HT2 受容体、α ₁ -アドレナリン受容体
痛風	尿酸過多	キサンチンオキシダーゼ
偏頭痛	血管攣縮	セロトニン 5HT_{1B}および5HT_{1D}受容 体
高脂質血症	脂質上昇	HMG CoA-レダクターゼ、アポリポタンパク質A、B-100
冠動脈疾患	血流を制限する冠動脈の閉塞	アンギオテンシン変換酵素、アポリポタンパク質 A 、 B-100

BOX IL OBSERVATIONS WHERE UNITY OF INVENTION IS LACKING

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1. In order for all inventions to be examined, the appropriate additional examination fees must be paid.

Group I. Claims 1-18, 71, 72, drawn to a method of treating diabetes.

Group I. Claims 1-18, /1, /2, drawn to a method or treating diabetes.

Groups III. Claims 1-8, 19-23, 48-50, 52-54, 60-64, 71, 72, and 74, drawn to a method of treating rheumatoid arthritis. Groups III. Claims 1-8, 24-28, 48-50, 52-59, 71, 72, and 74, drawn to a method of treating primary biliary cirrhosis. Groups IV. Claims 1-7, 29, 48-50, 52, 53, 65, 66, 71, and 74, drawn to a method of treating neurodegenerative disease. Group V. Claims 1-7, 30, 48-50, 52, 53, 68, 71, 74, drawn to a method of treating obesity.

Group VII. Claims 1-7, 31, 48-50, 52, 53, 69, 71, and 74, drawn to a method of treating osteoarthritis.

Group VII. Claims 1-7, 32, and 71, drawn to a method of treating spinal cord injury, drawn to a method of treating a viral

disease with a replication-competent clonal virus.

Group VIII. Claims 1-7, 33, 48-53, 70, 71, and 74, drawn to a method of treating graft versus host disease.

Group IX. Claims 34-47, 51, 73, drawn to a method of treating multiple sclerosis

The special technical feature each of Groups I-IX is drawn to treating a different disease using different self-peptides. For example, the insulin and numerous peptides using in group I would not be used any of the other groups, and pyruvate dehydrogenase complex and numerous peptides listed in claim 25 of group III would not be used in any of the other groups. Each type of disease has a different pathogenesis, requires different search criteria.

The special technical feature linking groups II-IX and I appear to be that they use a vector encoding a self-peptide. However, Jindal et al (Int J Exp Diabetes Res 2001 Feb; 2:129-38) anticipates claims of group I, but not groups II IX. Therefore, the technical feature linking the inventions of groups II-IX and I does not constitute a special technical feature as defined by PCT Rule 13.2, as it does not define one contribution as a whole over the prior art. Accordingly, groups II-IX and I are not so linked by the same or a corresponding special technical feature as to form a single general inventive concept.

This application further contains the following species of inventions: Species I. using a polynucleotide encoding the self-protein(s), wherein the polynucleotide is DNA.

Species II. using a polynucleotide encoding the self-protein(s), wherein the polynucleotide is RNA.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: The special technical feature of each of the species of groups II-IX and I is drawn to using a polynudeotide encoding the self-protein(s), wherein the polynucleotide is DNA or RNA. The polynucleotide in the form of DNA or RNA has different structural characteristics and different mode of operation. As indicated above, the Jindal reference anticipates species I but not species II, accordingly, the two species are not so linked by the same or a corresponding special technical feature as to form a single general inventive concept.
